

Product Range Data Sheet

Description

The Quarry Range has been designed to capture the popular stone types including natural stone and GRC and gives a whole new perspective on the use of stone. A range of super-durable high-grade architectural coatings with a sand-blasted appearance.

Designed for use on architectural metalwork including aluminium, stainless steel, mild steel, galvanised and zinc sprayed substrates.

The Quarry Range is an excellent complement to the architectural market where quality and consistency is paramount. Offering a deep-matt and realistic surface design to partner with architects and designers.

Properties

- Long term cosmetic protection
- Significantly high gloss retention
- Maximum film integrity
- Low sheen matt appearance
- Excellent natural stone and GRC effects
- No weight issues compared with real stone
- No mess and no dust suppression required
- No heavy transport issues
- Ease of installation

Durability

- Exterior and Interior
- Excellent resistance to colour change
- High levels of weathering resistance
- Ultra-durable Class 2

Environment

- Non-toxic
- Environmentally friendly production

Repair & Maintenance

- Low maintenance requirements
- Colour matched repair systems available for localised repairs
